IV Therapy Theory and Techniques

This course teaches the basic theory and techniques of venipuncture, continuous and intermittent intravenous infusions and intra-osseous infusion techniques. Emphasis is on medication administration techniques, venous system physiology, appropriate anatomical site selection, rapid identification of localized and systemic complications of intravenous therapy and methods to decrease infiltration, infection, and extravasation rates of intravenous therapy. Special focus upon electrolytes, blood and blood product, lipid and hyperalimentation infusions, and risks of intravenous therapy for pediatric and elder populations.

Must be a healthcare professional (licensed nurse or EMT) that is allowed to initiate and maintain IV’s
(or students nearing the end of program)

Supplies included in tuition.
