- Website Support (Tanner Clark)
  - RUNsync – No Current Project. – 798 Subscribers – We probably need to test the system in November before a weather events happens.
  - New RunIT CMS Functionality (COMPLETED)
    - **Site Layouts:** We have added the ability to have multiple site layouts and have added several enhancements to the Site Layout Editor. If more than one Site Layout is available, administrators can select which one they want to use for each page.
      - **NOTE:** This is the feature that will allow us to move the VC sub-menus out of the page layout areas and give the users the choice of selecting any of the available layouts. This will be a pretty big project because it will require several pieces to moved and migrated and then we will have to touch every page. We look to have this completed by Thanksgiving.
    - **Navigation:** We have added Custom Navigation Menus to RunIT CMS. This tool allows administrators to create a menu with custom content in each of the sub-menus. Select what menu you want to use in the Site Layout Editor.
    - **Secure Membership Portal:** RunIT CMS has always allowed for non-admin user management and logins. We have expanded this functionality so that pages can be marked as private. If a page is marked as private, only a logged in user can see it. Additionally, we have re-designed the non-admin homepage and toolbox for ease of use.
  - ONGOING PROJECTS
    - Calendar Emails – We are going to allow for email addresses for individual calendar contacts.
    - Custom Forms – Allow for integration with Third Party APIs. An example of this would be integrating your form with a PayPal account.
    - Videos! – We are in the process of producing videos for each section/module of the CMS to greatly expand our self-help section.
    - RUNsync – Mobile Apps – Will be updating the iOS App to be fully iOS 8 operational. It will work in its current state within iOS 8 but we need to get its code base up-to-date.
